DETAILED ACTION

Response to Amendment

1. Applicant's arguments, see Amendment, filed 11/13/2003, with respect to claims 1-2, 16 and 21-23 have been fully considered and are persuasive. The rejection of 08/13/2003 has been withdrawn.

Allowable Subject Matter

2. Claims 1-24 and 26-35 allowed.
3. The following is an examiner's statement of reasons for allowance:

A search of the prior art did not disclose a light diffusing plate and a production method of producing a light diffusing plate comprising a combination of structural elements, more specifically:

(a) An unresolvable structure with low passing areas being darker than passing areas in the same plane and disposed past the spheres in a passing direction of the collimated light and having a binder adhered to at least a circumferential portion of the spheres, the circumferential portion is part of a half of the spheres which faces the plane as recited in instant claims 1, 16, 21 and 34.

(b) A light sensitive thermal developable material layer which is formed between the light transmitting support and the diffusion layer that contains a light-sensitive thermal developable material which has colorless areas and colored

areas formed by being heated after nearly collimated light is incident from the diffusing layer side, as recited in claims 3 and 17.

(c) A thermal ablative layer between the light transmitting support and the diffusing layer that contains a light absorptive thermal ablative material, which has intermittent areas where the thermal ablative material has been removed and are separated by non-removed areas, as recited in claims 4 and 18.

(d) The contacting material contains a light-sensitive material which has a colorless exposed areas and a light absorptive material and the light-sensitive material also has colored areas formed from being heated and developed after nearly collimated light is incident from a side of the diffusing layer, as recited in claims 5 and 19.

(e) A light sensitive material which has colorless exposed areas and is provided between the contacting material and the light transmitting support, as recited in claims 6 and 20.

(f) A layer of material having intermittent areas where light transmissivity is greater than other areas in the layer and the layer disposed passed the spheres in a passing direction of the collimated light, as recited in claim 24.

(g) A production method where a paint is prepared by mixing materials of the passing and low-passing areas and applying simultaneously on the light transmitting support in such a way that the passing and low-passing areas are provided in a same plane and drying or curing the paint.

The following prior art (a) Vance (U.S. Patent No. 5,781,344) and (b) Staehle et al. (U.S. Patent No. 2,378,252) do not teach that portions of the passing areas and low-passing areas are disposed past the spheres in a passing direction where the low passing areas being darker than the passing areas.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
